Hello Katie -

This morning I reviewed the materials for this project. Can you please include this email in the public comments for the project.

As a resident of 12500 Skyline Blvd, Woodside, CA 94062, I would like to express unqualified support for the project. The area north of roughly 12860 Skyline is underserved by internet providers and other forms of modern connectivity (eg. fiber, cable, etc), this tower could and hopefully does provide enhanced wireless coverage which is currently spotty to non-existent in the area. While the population is small, the need for modern connectivity is essential for day to day life. Wireless connectivity is the only technology which can provide economical connectivity to the residents of the area. Prior efforts to bring fiber to the area never came to fruition for reasons I am unsure of, but suspect economic factors made it untenable.

Beyond the need, the visual and environmental impact of the tower is low to non-existent both for local residents and those viewing the area from afar.
